

# Collaborating with suppliers

Collaborating with your suppliers can unlock new ways to reduce air pollution. If they visit you, deliver to you, maintain or make something for you, and you've not discussed whether you could cut pollution together, why not start the conversation on Clean Air Day?

Here are some of the main aspects of products or services where collaboration can bring about improvements to air pollution – try inviting suppliers to have a conversation about the options for reducing air pollution together:

## 1 Reduce unnecessary journeys

Minimise traffic to site (especially city centre sites) through consolidated deliveries and minimising visits by suppliers or tradespeople.

## 2 Go electric

Minimise emissions from essential vehicles, through increasing the percentage of low emission vehicles in your fleet, agreeing for suppliers to install electric vehicle charging points, or asking suppliers to use low emission vehicles.

Recommend your supplier to sign up to the Clean Van Commitment: a pledge for van fleet operators to transition their fleets to be zero emission in cities, by 2028.

For more information, visit:  
[cleanvancommitment.org](http://cleanvancommitment.org).

## 3 Cleaner building and construction

Reduce air pollution from building works (the result of dust and dirt from the building process and the use of diesel generators for power).

## 4 Low pollution products

Explore the lifecycle emissions of products and choose those that contribute the least to air pollution.

## 5 Cleaner air power generation

Switch to renewable energy sources wherever possible, ensure that any onsite boilers are well maintained, and that the whole building system is efficient to minimise fuel burned on site.

## 6 Good ventilation

Check building ventilation systems have the appropriate filters to block out pollution coming into the workplace.
